
[Microwave Communication Tower](#)

Microwave Communication Tower

Microwave communication tower is a tall structure designed for supporting parabolic antenna which is mainly used for sending and receiving microwave electron system. Microwave tower has the same structure as common communication tower, and the difference between the two types of radio masts lies in what kind of antenna they support. We usually call the tower especially constructed to support a parabolic antenna, drum antenna or grilling antenna as microwave communication tower.

Quality control at ZHAOWEI

In order to ensure quality, we at ZHAOWEI use modern fabrication technologies to manufacture microwave communication tower, and the multi-item templates, bending dies, jigs and fixtures can be reused in case of repeat orders. We also strive to perfectly complete each small quantity order and proto item production.

The first piece of each different type of template is duly inspected by our specialized Quality Inspectors, thus ensuring accurate and quality manufacturing. The quality of our microwave communication tower is controlled through sample check during process, and then 100% quality inspection before leaving factory.

Thus, we are confident that all our microwave towers are qualified, and users can feel secure in purchasing.
